

Nominal BW = $\frac{1}{2T}$ = W

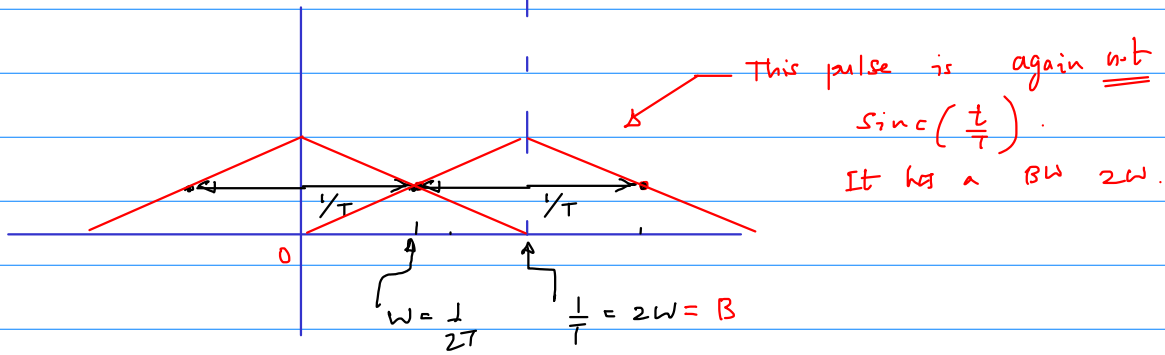

(1) Case 1 : W = B, sampling time T remains fixed

(2) Case 2 : W < B < 2W, sampling time T remains fixed

(3) Case 3 : 2W = B, sampling time T remains fixed

(4) Case 4 : What if the pulse BW B is Larger than 2W.

⇒ Then Nyquist criterion fails.

(5) Case 5 : What if the pulse BW B is Smaller than W

⇒ Again Nyquist criterion fails.
